Homepage How AutoCAD Works Functional components: the canvas and drawing area In AutoCAD, there are two fundamental parts to a drawing: the canvas and the drawing area. The drawing area is where you place and draw your lines, blocks, and text. The canvas is a blank area that automatically appears when you place a block or a text string on the drawing area. The canvas is where you place any text, dimensions, annotations, and so on. The canvas in AutoCAD is always square—not rectangular—and it can be made larger by selecting the canvas size option in the menu bar. By default, the canvas size is set to cover 80 percent of the drawing area. If you do not want to see the canvas, simply do not select it. To draw on the canvas, click anywhere in the drawing area. When you click, a dark-gray border appears around the canvas. When you drag an object on the drawing area or add a text or dimension, the area where you clicked is colored and is not visible until you drag or select that area on the canvas. The easiest way to draw in the drawing area is to click on the object you want to draw, enter its dimensions, and then click on the canvas to place it. You can also add a drawing-area rectangle as a background for the drawing area. For example, in the following figure, a rectangle has been added in the drawing area. You can resize the drawing area, and to do so, follow these steps: Choose View tab ? Drawing panel ? Drawing Area. The horizontal and vertical size of the drawing area can be altered using the smaller and larger buttons. If you drag the upper-left corner of the drawing area, a small diamond appears on it, showing the X and Y coordinates of the top-left corner of the drawing area. You can drag the upper-right corner of the drawing area to align the lower-left corner of the drawing area with the lower-right corner of the canvas. This is used to align the top, bottom, right, and left sides of the drawing area to the top, bottom, right, and left sides of the canvas, respectively. The difference in the size of the drawing area and the canvas depends on the project that you are designing. For example, a typical city-planning project requires a large drawing area, with a drawing

Category:Computer-aided design software Category:AutoCADQ: Shopping bot does not move mouse to GUI (Python/Tkinter) My Python shopping bot doesn't seem to be moving mouse to GUI. All clicks are registered though, that's why I see all GUI elements being clicked but not moving the mouse around. Any ideas what can be wrong? The code I'm running looks as follows: `from tkinter import * from tkinter import messagebox from tkinter import font import tkinter from tkinter import messagebox import tkinter font = tkinter.font.Font(family = 'Calibri',`

```
size=30, weight = 'bold') def shopping_bot(): global toolbar global label1 global list1 global label2 global list2 global
toolText global allItems global toolLabel #Defining menu menu = Frame(mainframe) menubar = Menu(menu)
filemenu = Menu(menubar) filemenu.add_command(label='Print', command=shopping_bot)
filemenu.add_command(label='Exit', command=mainframe.destroy) menubar.add_cascade(label='File',
menu=filemenu) menu.pack(fill=X, expand=True) #Defining buttons toolButton = Button(mainframe, font=font,
text='Test', width=200, height=30, background='#d3d3d3') toolButton.pack(side=LEFT) mainframe.mainloop() I
added mainframe.mainloop() as I tried to fix the issue myself, but I don't know if it is a solution or not. The buttons
are simply just the Start and Exit buttons. I'm running my program on Windows 7 on a desktop computer A: You
